Project Fully Graded
Zion James
Sai Venkata Ganesh Penumarthi
Sri Vidya Bachina

Motivation

The motivation for this project is because of the rapid decrease of budget in schools. Because of this decrease we have a lack of personnel especially in classrooms with large numbers. To assist in this, I want to design a program that will automatically grade an assignment. Of course, a check should be noted as well to be sure the grade is accurate, but this should reduce the amount of time needed to go through and score essays and reports.

Significance

The significance of this project is that while other online tools may make suggestions or compare how original a paper is. This program will be different because it will come up with a grade for the report. This will reduce the amount of time needed to read and grade large numbers of assignments and essays. Also, using this as a base we can look at creating a more ideal system to have higher level writing.

Objectives

Design and Create a program that:

- Creates a model for reports
- Analyzes essays/reports
- Generalize a report standard for grading multiple types of reports
- Rates the essay
- Generate a grade based on generalized criteria

Features

- Model Creation
- Grading standard criteria selection
- Assignment grade analysis
- Overall essay rater
- Grade essay
- Similarity analysis of essays for potential plagiarism
